IEA SHC Task 61 / EBC Annex 77

Integrated solutions for daylight and electric lighting

From component to user centered system efficiency

Operating Agent: J. de Boer, Germany

Subtask A

B. Matusiak, Norway
User Perspective,
Requirements

Subtask B

M. Fontoynt,
Denmark
Integration and
optimization of
daylight and electric
lighting

Subtask C

D. Geisler-Moroder,
Austria
Design support for
practioners
(Tools, Standards,
Guidelines)

Subtask D

N. Gentile, Sweden
W. Osterhaus,
Denmark
Lab and field study
performance tracking

Joint Working Group

Evaluation method for integrated lighting solutions

Virtual reality (VR) based Decision Guide

Subtask C: Design Support for Practitioners

Objective

Focus on the application of technical innovations in the field of integrated lighting solutions in practitioners' workflows. Bring findings onto the desktops of designers by integration into widely used software tools, standards and codes, and design guidelines.

C.1 Review of state of the art design workflows

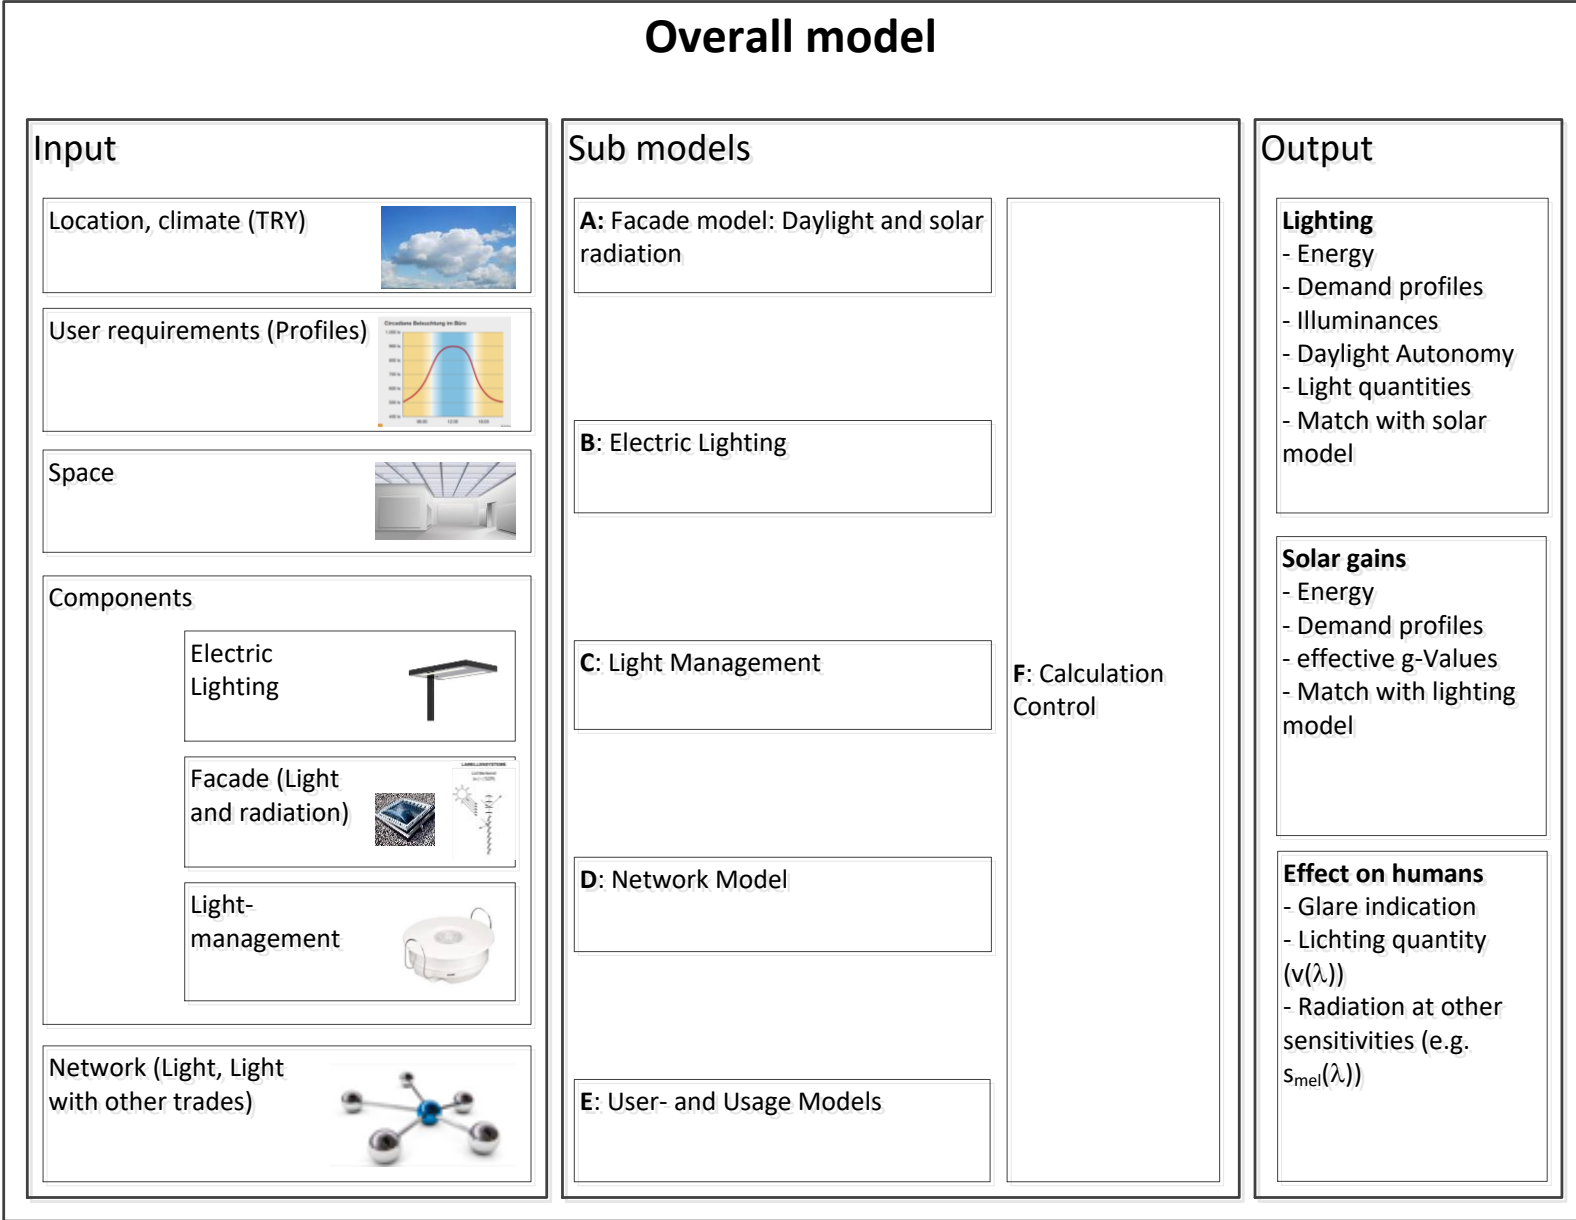

C.2 Standardization of BSDF daylight system characterization

C.3 Spectral sky models for advanced daylight simulations

C.4 Hourly rating method for integrated solutions

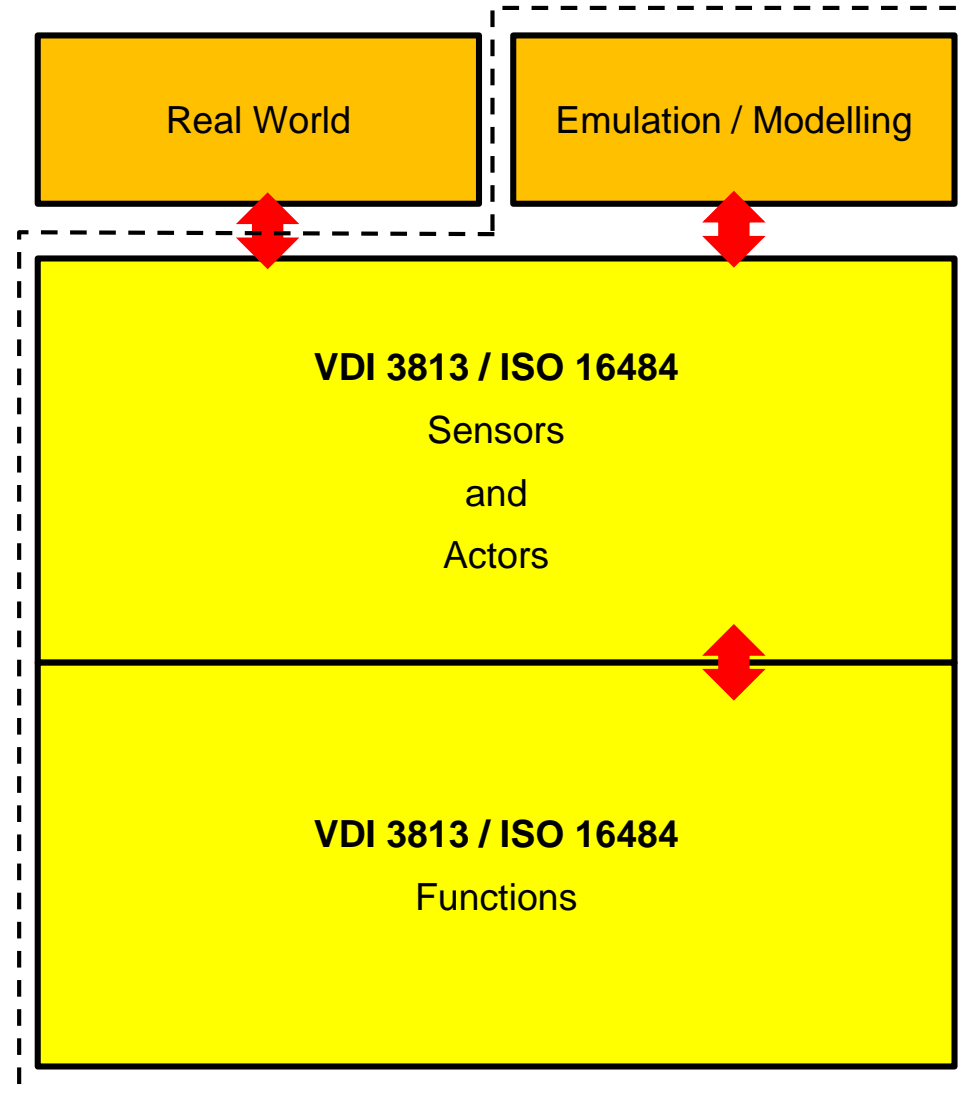

Hourly Rating Method

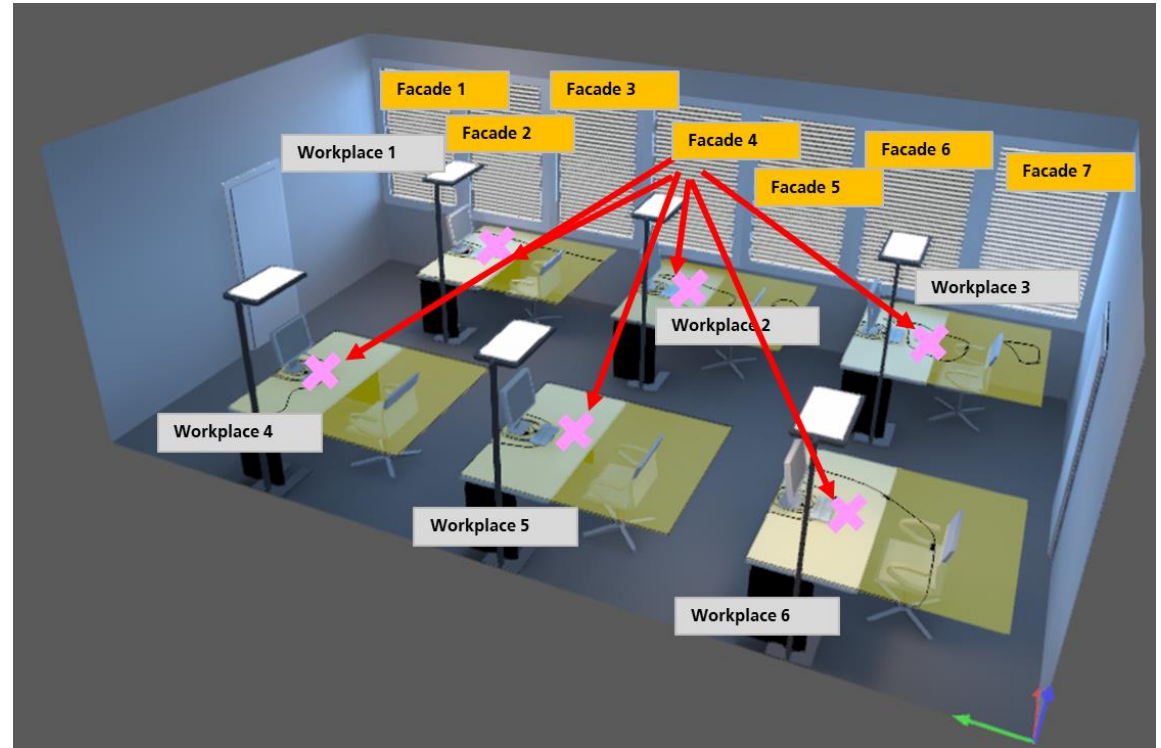

Relation to BACS

Translation into ISO 16484 logic

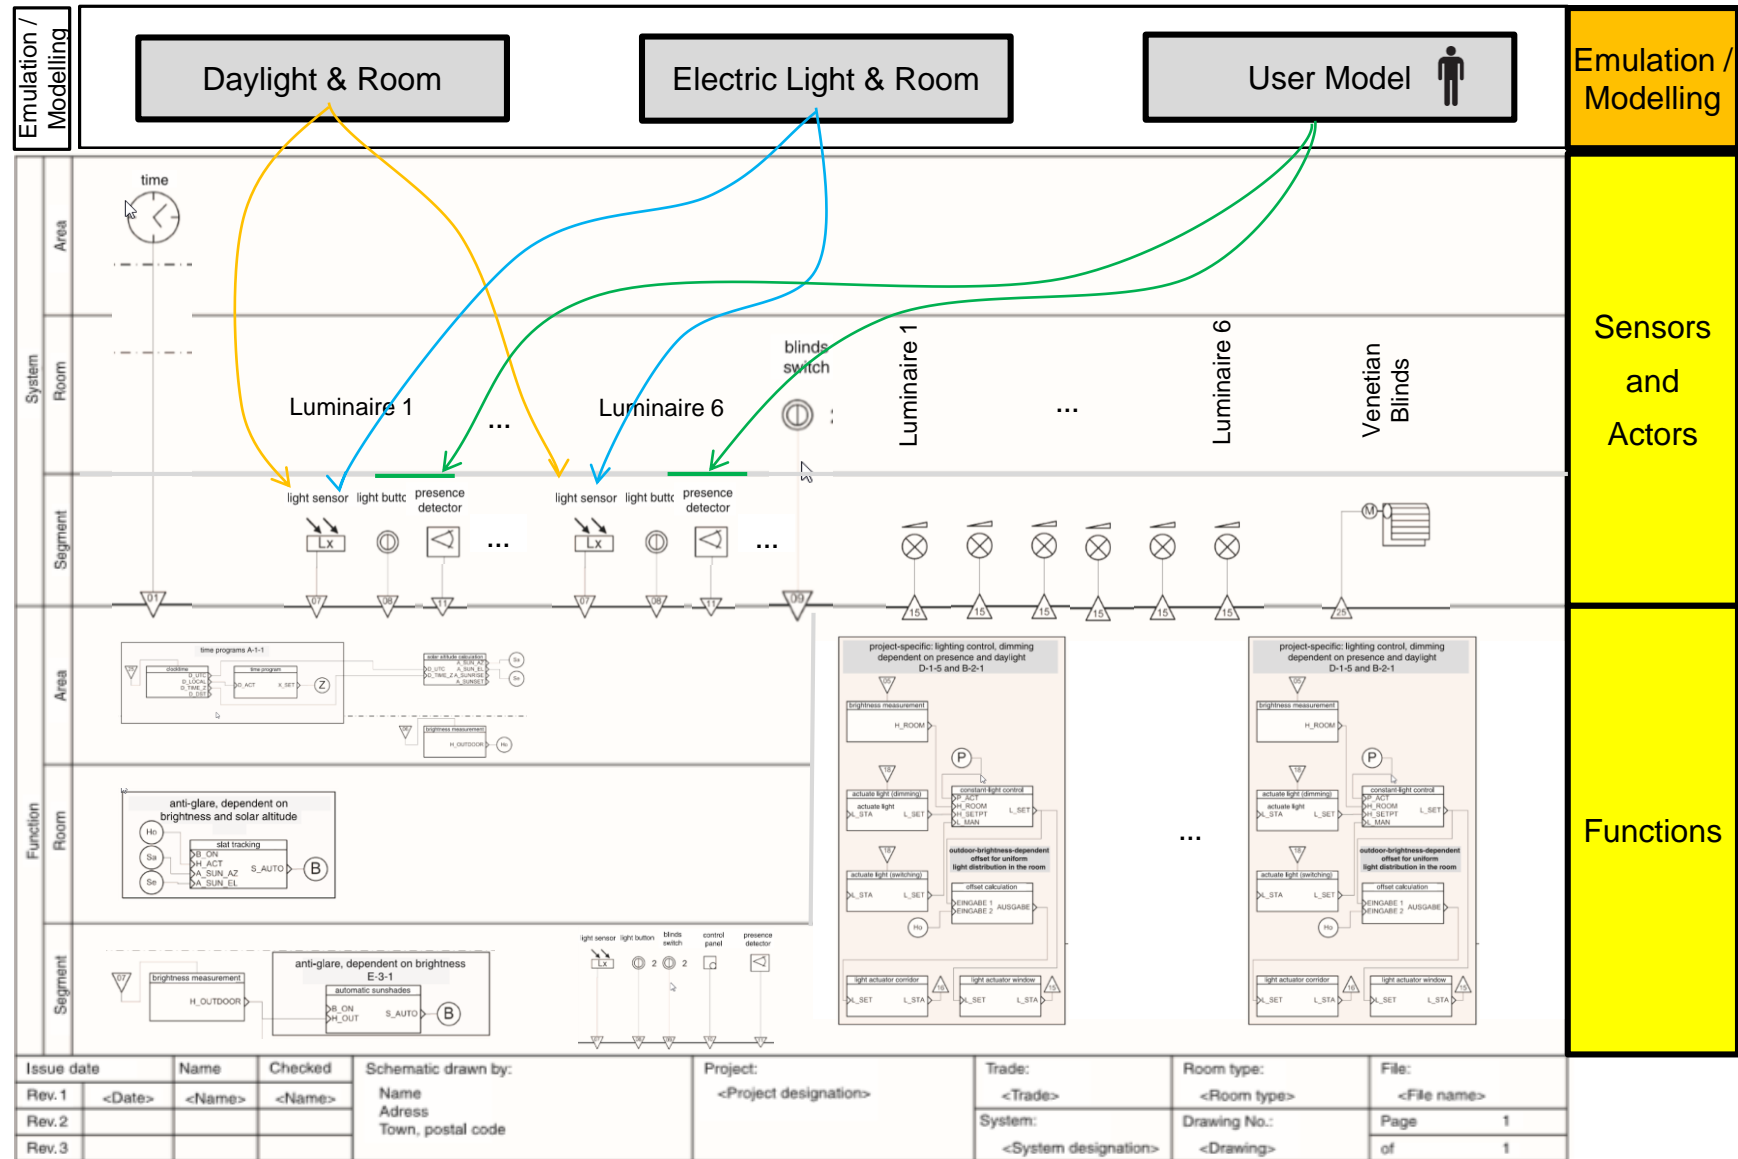

- “Emulation” / Modeling of inputs & outputs
- BMS: BACS logic
 - Sensors & Actors
 - Functions

Integrated Daylight and Electric Lighting

Formal „Room Control Schematic“ according to ISO 16484

Venetian blinds

Task	Simulation method	System characterization / BSDF
Daylight Factor	Raytracing possibly mkillum continuous sky model	(a) Geometry (b) Low-res BSDF
Point-in-time illuminance for overcast / sunny sky	Raytracing continuous sky model	(a) Geometry (b) Low-res BSDF
Point-in-time glare metric for overcast / sunny sky	Raytracing peak extraction continuous sky model	(a) High-res BSDF (b) Low-res BSDF (with peak extraction)
Point-in-time rendering for overcast / sunny sky	Raytracing peak extraction continuous sky model	(a) High-res BSDF (b) Low-res BSDF if peak extraction
Annual illuminance metric	DC-method or 3-PM	Low-res BSDF
Annual glare metric	5-PM peak extraction	Low-res BSDF and (a) Geometry or (b) High-res BSDF or (c) Low-res BSDF (only if PE)

Work in progress...

Aim

The „right“ system data for

- Transparent systems¹
- Woven shades
- Venetian blinds
- Specular blinds / grids
- Micro-/Nano-structured systems
- Prisms, LCPs

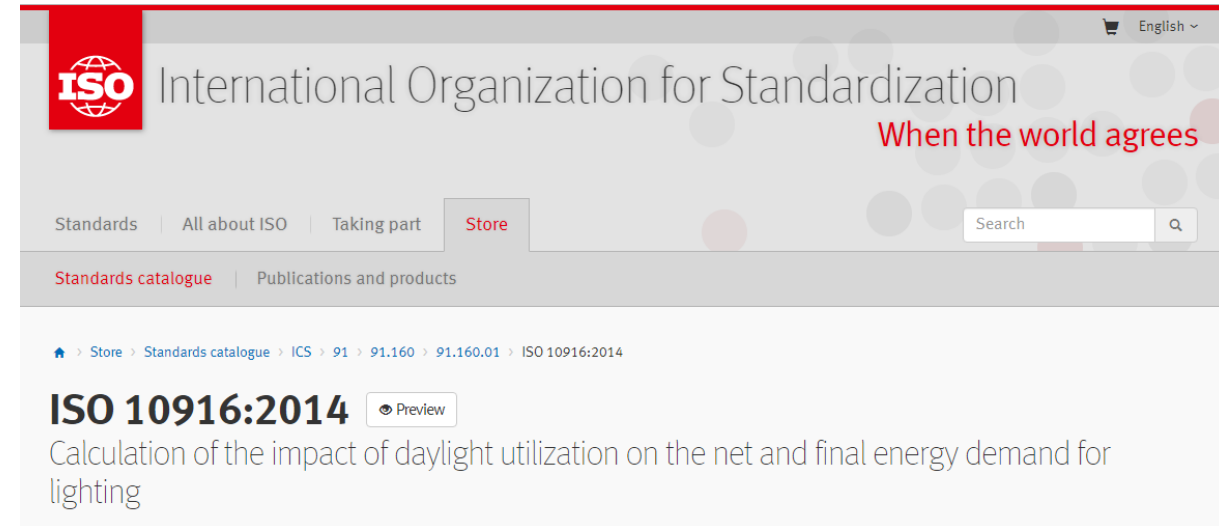

¹ Clear / electrochromic glazing, films

Work in
progress...

Task Force „Revision of ISO 10916“

Proposed new scope

- extend ISO 10916 to an hourly based (annual) estimation of the daylight supply in buildings
- based on location and local climate data
- include facades with and without shading systems
- allow to model different daylighting control strategies including linkage with electric lighting systems (e.g. indoor occupation sensing)
- appropriate interface with BACS formalism

The screenshot shows the ISO website interface. At the top, the ISO logo is on the left, and the text "International Organization for Standardization" and "When the world agrees" is on the right. Below this is a navigation bar with links for "Standards", "All about ISO", "Taking part", and "Store". A search bar is also present. Below the navigation bar, there is a breadcrumb trail: "Standards catalogue | Publications and products". The main content area displays the title "ISO 10916:2014" with a "Preview" button. Below the title, the description reads: "Calculation of the impact of daylight utilization on the net and final energy demand for lighting".
